PROFESSIONAL SUMMARY

Software engineer with three years of production experience across full-stack development, backend systems, and machine learning. I design and ship scalable REST APIs, real-time applications, and computer-vision pipelines in startup environments — from YOLOv8 and EasyOCR inference pipelines to Redis-backed Node.js services and responsive React front-ends. Proficient in Python, C++, TypeScript, and JavaScript, with depth in Node.js, PostgreSQL, Redis, and distributed systems architecture, and experienced owning major platform components end to end.

TECHNICAL SKILLS

Languages Python · C++ · C · TypeScript · JavaScript · Java · Bash · PowerShell · HTML · CSS

Backend Node.js · Express.js · REST APIs · Redis · Socket.IO · Prisma ORM · Authentication Systems · Real-Time Systems

Frontend React · Next.js · TypeScript · Tailwind CSS · Framer Motion · Responsive & Accessible UI

Databases PostgreSQL · MySQL · MongoDB · Redis · SQLite · MariaDB · Schema Design · Query Optimisation

ML & Computer Vision YOLOv8 · OpenCV · EasyOCR · PyTorch · TensorFlow · scikit-learn · Model Training · Image Processing

DevOps & Tools Git · GitHub · Docker · Linux · CMake · Vercel · Render · Heroku · API Integration

Core CS Data Structures & Algorithms · OOP · DBMS · Operating Systems · Computer Networks · Graph Theory

PROFESSIONAL EXPERIENCE

Software Developer | Web Deed

2025 – Present

Shopify-style e-commerce platform startup

- Spearheaded development of core platform features — product catalog management, order workflows, and seller dashboards — contributing directly to the platform's go-to-market timeline.
- Designed and implemented scalable backend services in Node.js and PostgreSQL, improving API response times through query optimisation and Redis-based caching.
- Owned end-to-end delivery of major platform components, from architecture decisions through deployment, working directly with founders to align technical execution with business priorities.
- Led front-end development of dynamic React interfaces across buyer and seller surfaces, ensuring consistent UI/UX and cross-browser compatibility.
- Resolved critical production incidents through proactive monitoring, hotfix deployment, and documented incident response, working in Agile sprints with regular code review and retrospectives.

Web Developer | Grand Productum

2024 – 2025

- Architected and delivered full-stack web applications supporting the company's digital presence, driving measurable improvements in site performance and user engagement.
- Improved core web vitals by 35%+ through code splitting, asset optimisation, and lazy loading, significantly reducing page load times.
- Developed and maintained responsive, accessible UI components in React and TypeScript, improving the mobile experience across all major devices.
- Integrated third-party APIs and payment gateways and translated business requirements into scalable technical solutions, enabling new revenue streams and contributing to 40% growth in online customer acquisition.

Software Developer | FMKC

2023 – 2024

Telegram-based crypto rewards platform

- Architected and developed a Telegram bot platform distributing automated crypto rewards to thousands of users on a reliable, event-driven Node.js and PostgreSQL backend.
- Designed a token reward and transaction system with idempotent processing logic, guaranteeing consistency and preventing duplicate payouts under high concurrency.
- Implemented secure authentication with role-based access controls and built automation for reward triggers, onboarding, and notification pipelines, sharply reducing manual intervention.
- Optimised database schema and indexing strategies to sustain sub-100ms query performance on real-time transaction throughput at peak load.

FEATURED PROJECTS

Digital Code Vault — *TypeScript · Next.js · Node.js · PostgreSQL* [Live ↗](#) [Code ↗](#)

- Built a secure digital licensing and code-delivery platform with an admin control panel for issuing, tracking, and revoking product keys at scale.
- Designed the vault around idempotent key operations so redemptions can be safely retried without ever double-issuing a code, with full audit history per product.

Klooz — Commerce Platform — *JavaScript · Next.js · Node.js · Tailwind CSS* [Live ↗](#) [Code ↗](#)

- Developing a full commerce product — catalog, cart, checkout flow, and an operator-facing back office — split across a brand site and the application itself so each ships independently.
- Modelled order workflows as explicit state machines around real seller operations, with route-level code splitting keeping the storefront fast on mobile networks.

Ride-Hailing Platform — *TypeScript · Node.js · Prisma ORM · Redis · PostgreSQL*

- Built a full-stack ride-hailing platform inspired by inDrive, featuring real-time driver–passenger matching, ride lifecycle management, and dynamic price negotiation.
- Architected the backend on Node.js and Prisma ORM over PostgreSQL with Redis pub/sub for live location updates, JWT role-differentiated access for drivers, passengers, and admins, and geospatial indexes tuned for high-throughput concurrent requests.

Helmet & License Plate Detection System — *Python · YOLOv8 · OpenCV · EasyOCR · Deep Learning*

- Developed a real-time computer-vision solution for intelligent traffic monitoring, combining helmet detection and automatic license plate recognition in a single unified pipeline.
- Fine-tuned YOLOv8 on custom datasets for high precision and recall, then built an EasyOCR stage to normalise plate text from video frames — optimised with OpenCV preprocessing for near real-time inference on edge hardware.

Traffic Violation Detector — *Python · YOLOv8 · OpenCV · Flask* [Code ↗](#)

- Built an end-to-end violation detection system that ingests video, annotates footage, stores evidence snapshots for every detection, and serves results through a web review interface.

Memory Pressure Service — *PowerShell · Windows Services · Systems Monitoring* [Code ↗](#)

- Developed a Windows service that monitors system and per-process memory, detects runaway processes, and safely mitigates memory pressure before slowdowns or crashes occur.

Sign Language Recognition System — *Python · OpenCV · CMake · Machine Learning*

- Engineered real-time American Sign Language gesture recognition from live video, tuned through dataset augmentation for robustness across varied lighting.

Resume–Job Match Analyzer · Movie Recommendation Engine — *Python · Flask · NLP · TF-IDF · scikit-learn* [Code ↗](#)

- Built two full-stack ML applications using TF-IDF vectorisation with cosine similarity — one scoring and explaining resume-to-job alignment, the other serving fully offline content-based movie recommendations.

Penya Blaugrana Islamabad — *JavaScript · Next.js · Tailwind CSS* [Code ↗](#)

- Building the official web platform for the recognised FC Barcelona supporters' club in Islamabad, updatable by non-technical organisers.

Additional Work: 25 public repositories — arbitrage bots, REST APIs, CLI tools, automation, and deployed storefronts.
